(54) Title: LIQUID CRYSTAL DISPLAY DEVICE

(57) Abstract: To propose a liquid crystal display device for suppressing a wavelength dependence and a viewing dependence in a dark state. A polarizer (21 a) of a circularly polarizer (21) and a polarizer (22a) of a circularly polarizer (22) are arranged such that an absorption axis (90°) of the polarizer (21a) and an absorption axis (0°) of the polarizer (22a) are at substantially right angle to each other. A retardation plate (21b) of a circularly polarizer (21) and a retardation plate (22b) of a circularly polarizer (22) are arranged such that a slow axis (165°) of the retardation plate (21b) and a slow axis (75°) of the retardation plate (22b) are at substantially right angle to each other. A retardation plate (21c) of a circularly polarizer (21) and a retardation plate (22c) of a circularly polarizer (22) are arranged such that a slow axis (105°) of the retardation plate (21c) and a slow axis (15°) of the retardation plate (22c) are at substantially right angle to each other.
